

Color Picker Game

Game Overview

- **Target color** : It will be mentioned at the top and will be the target that has to be picked from the remaining options
- **New Color button** : Click it will reset the game
- “**Try Again**” message should be printed when wrong color is clicked and “**Correct**” message should get printed, once the correct color is clicked.
- Once game is over, “**New Color**” button should change its name to “**Play Again?**”

Game Start Page

When Wrong Color Is Picked

When Right Color Is Picked

HTML CODE

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
  <title>Color Game</title>
```

```
  <link rel="stylesheet" type="text/css" href="colorPicker.css" />
```

CSS file linked

```
</head>

```

Just HTML

Color Picker

New Color

CSS CODE

Setting h1 color white with steelblue background color and 0 margin.
Setting padding of top and bottom to 20px

```
h1{  
    color: white;  
    background-color: steelblue;  
    text-align: center;  
    font-weight: normal;  
    text-transform: uppercase;  
    padding: 20px 0;  
  
}
```

Setting body background color to black and font to arial

```
body{  
    background: #232323;  
    margin:0;  
    font-family: "arial";  
  
}
```

Setting target color font size double to the rest of the text

```
#targetColor{  
    font-size: 200%;  
}
```

Setting button background color to white with bold text and some other styling

```
button{  
    border:none;  
    background-color: white;  
    text-transform: uppercase;  
    height: 100%;  
    font-weight: 700;  
    color: steelblue;  
    letter-spacing: 1px;  
    font-size: inherit;  
    transition: all 0.3s;  
}
```

Hovering button should change text to white and background to steelblue

```
button:hover{
    color:white;
    background-color: steelblue;
}
```

Squares with default red color are of width 12% with little bit of margin for gaps between squares. Float is set to left that specifies that squares should come one after the other. Radius will make square 30% round

```
.square{
    background-color: red;
    width: 12%;
    margin:1.66%;
    float: left;
    padding-bottom: 30%;
    border-radius: 30%;
    transition: background 0.7s;
}
```

Container that will contain all the squares should be of width 600px

```
.container{  
    margin: 20px auto;  
    max-width: 600px;  
  
}
```

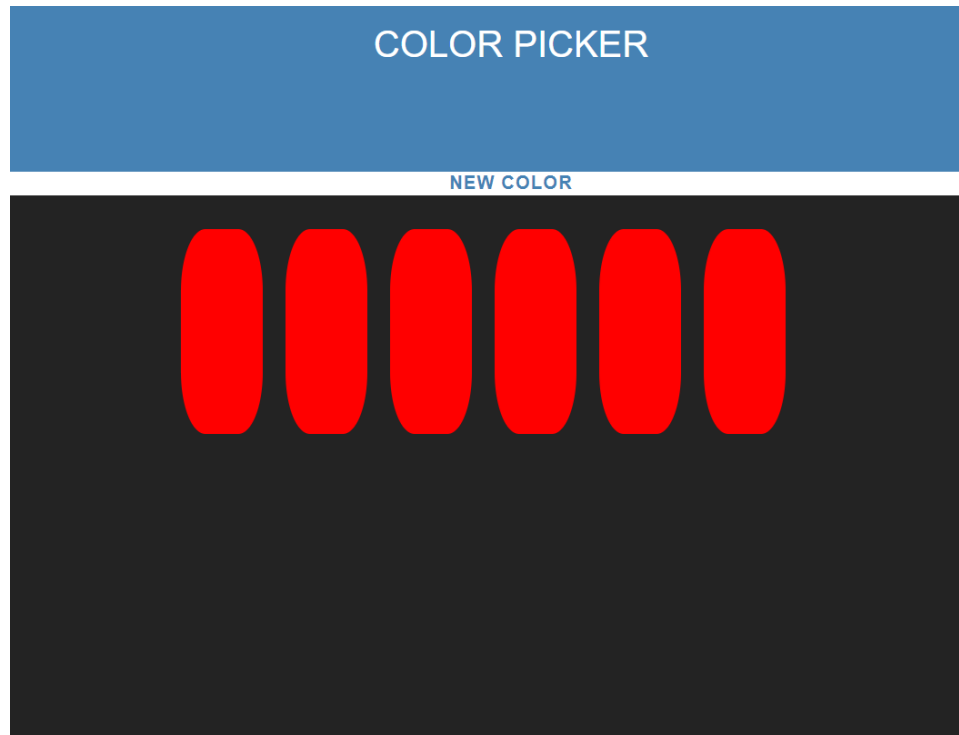

Stripe background color overwritten to white and all text should be aligned in center

```
#stripe{  
    text-align: center;  
    background-color: white;  
    padding:auto 0;  
  
}
```

Message should be in arial and upper case with some other styling

```
#message{  
    font-family: "arial";  
    text-transform: uppercase;  
    height: 100%;  
    font-weight: 700;  
    letter-spacing: 1px;  
    font-size: inherit;  
    transition: all 0.3s;  
  
}
```

HTML + CSS

JS CODE

All the HTML elements are fetched and assigned to some JS variable

```
var noOfSquares=6;
```

```
//pallet  
var arr= [];
```

```
//color picked for target  
var picked;
```

```
//to get all the squares div  
var squares = document.getElementsByClassName("square");
```

```
//to get the RGB display  
var targetColor = document.getElementById("targetColor");
```

```
//message that can be empty, try again or correct  
var message = document.getElementById("message");
```

```
//heading  
var head = document.querySelector("h1");
```

```
//reset button  
var reset = document.getElementById("NewColor");
```

Calling init() as first statement will set the game

```
init();
```

Defining init()

```
function init()  
{  
    //generate random coloured palette  
    arr= generateRandomColor(noOfSquares);  
  
    //get target color randomly from the array size  
    picked = arr[randomPickedColorIndex()];  
  
    //updating target RGB display  
    targetColor.textContent = picked;  
  
    for(var i=0;i<squares.length;i++)  
        {  
            //setting square's color one by one to palette color  
            squares[i].style.backgroundColor=arr[i];  
  
            //adding eventListener to all squares  
        }  
}
```

```

for(var i=0;i<squares.length;i++)
{
    //setting square's color one by one to palette color
    squares[i].style.backgroundColor=arr[i];

    //adding eventListener to all squares
    squares[i].addEventListener("click",function(){
        if(picked===this.style.backgroundColor)
        {
            message.textContent="Correct";
            message.style.color="green";

            //when correct, set everything to the target color and set newcolor to
            playagain

            changeColor(this.style.backgroundColor);

            reset.textContent="Play Again?";
        }
        else
        {
            message.textContent="Try Again";
            message.style.color="red";

            //to hide the wrong square, we will set it to background color
            this.style.backgroundColor="#232323";
        }
    });
}

```

Setting eventlistener for reset button

```
reset.addEventListener("click", resetIn);
```

To get the random color from existing palette

```
function randomPickedColorIndex()  
{  
    return Math.floor(Math.random()*arr.length);  
}
```

To get the random palette of colors

```
function generateRandomColor(limit)  
{  
    var color=[];  
    for(var i=0;i<limit;i++)  
        color.push(rgbGenerator());  
    return color;  
  
}
```

To generate a single rgb

```
function rgbGenerator()  
{  
    var r= Math.floor(Math.random()*256);  
    var g= Math.floor(Math.random()*256);  
    var b= Math.floor(Math.random()*256);  
  
    return "rgb("+r+", "+g+", "+b+")" ;  
}
```

When correct, change everything to the correct color

```
function changeColor(color)  
{  
    for(var i=0;i<squares.length;i++)  
        squares[i].style.backgroundColor=color;  
    head.style.backgroundColor=color;  
}
```

Set things when player try to reset

```
function resetIn(){  
    arr=generateRandomColor(noOfSquares);  
    picked=arr[randomPickedColorIndex()];  
    targetColor.textContent = picked;  
    message.textContent="";  
    head.style.backgroundColor= "steelblue";  
  
    for(var i=0;i<squares.length;i++)  
        squares[i].style.backgroundColor=arr[i];  
  
}
```

HTML + CSS + JS

IT'S DONE!

Thank You
